Art Unit: 3683

1. Applicant's representative brought up the issue that prior art "3,737,204" uses through hardened material only on outer ring and rollers and not on inner race because under repeated stress cycle through hardened steel are susceptible to fatigue cracking across the entire thickness of the inner race, see col. 3, lines 35-67 and col. 4, lines 1-17; while applicant claims that "both bearing disks made from a through-hardenable ferrous material". Examiner agreed with applicant's representative explanation.

Examiner had stated in the final rejection, paper no. 5, June 12, 2002, paragraph no. 5 that "through hardened" rolling bearing components which include rings, balls, washers, and generally all parts of a rolling bearing are well known as disclosed by Volkmuth (U.S. Patent Number 6,203,634 B1), see col. 5, lines 65-67 and col. 6, lines 1-6.

In view of this, Examiner is withdrawing the Final Rejection filed on paper no. 5, June 12, 2002 and a non-final rejection office action will be issued.
